

What Wistudi solves

One platform to author, publish, distribute and deliver learning across digital, print and lower-connectivity environments.

Fragmentation removed

AI-assisted authoring

Create and customise Flows, XP Video and learning resources from one workflow.
Full AI-assisted authoring targeted for end of Oct 2026.

Connected tools

Bring activities, media, assessment and external EdTech blocks into one learning experience.

Publishing power

Educators and organisations can publish interactive, digital and printable learning content themselves.

Multi-format delivery

Interactive Flows, video experiences, documents and worksheets can come from the same source.

Social learning layer

Learning can continue through sharing, discussion, collaboration and community interaction.

Commercial relevance across segments

1.3B

school-age children
lack internet at home

UNICEF / ITU

~40%

primary schools
globally connected
to the internet

UNESCO GEM

\$52B+

estimated investment
for basic offline digital
access in lower-income
markets

UNESCO

Creators

Institutions

Partners

B2G pathway

This strengthens Wistudi across creator-led adoption, institutional deployments and partner-led distribution. In addition, it opens a B2G pathway where governments and development agencies are investing in connectivity, platforms, devices and learning resources.

This allows the platform to serve connected, lower-connectivity and future offline-capable learning environments.
