

DISTRIBUTOR COMMERCIAL GUIDE

Four ways to work with Wistudi

A straightforward overview of Wistudi licensing, managed content production, partner bundles and local payment distribution.

Choose the commercial pathway that fits your customers

PATHWAY	WHO IT SERVES	WHAT THE DISTRIBUTOR SELLS
01 Wholesale licensing & resale	Schools, academic teams and institutions	Wistudi team/organisation access for self-managed publishing and teaching
02 Managed content + licensing	Organisations needing production support	Wistudi access plus a separately quoted, ready-to-use content package
03 EdTech partner bundles	EdTech companies and content providers	Wistudi licences to a partner bundling its technology and co-created content
04 Local Merchant of Record • LIMITED	Appointed distributor in a specific market	Local storefront/payment operations with an agreed share of transactions

The Wistudi foundation

For organisational customers, Wistudi is a complete interactive publishing, teaching and learning environment - not simply a content creation tool.

INCLUDED IN ORGANISATIONAL ACCESS	AVAILABLE AS AN OPTIONAL PACKAGE
Organisation account and standard LMS: manage faculty/teams and learners; publish and assign learning; view progress and completion.	AI-assisted publishing with an allocated credit allowance, including support for creating learning materials based on uploaded PDFs and documents.
Create and deliver Flows, XP Videos, curricula, interactive lessons, worksheets and courses; present live or assign independent learning.	Additional AI credits and separately scoped integrations, advanced functionality or commissioned content production.

A distributor may operate more than one pathway. Licence quantities, terms, rates, territory rights and service fees are agreed in the relevant commercial proposal.

This guide describes available and potential commercial arrangements; it is not a binding quotation or a commitment to deliver unreleased functionality.

01 + 02 ORGANISATION CUSTOMERS

01 Wholesale Licensing & Resale

Team and organisation access • Customer manages its own content production

Distributors purchase Wistudi organisational licences at an agreed wholesale rate and resell access to schools, training organisations, academic departments and institutions.

Who this fits. Organisations that want their own team to create, convert, oversee, teach, present and distribute learning content.

What they receive. Standard LMS/organisation management and Wistudi creation tools, including Flows, XP Videos, interactive lessons, curricula, courses and printable worksheets. AI-assisted publishing can be included through an allocated-credit package.

How it is charged. Licensing is based on the agreed organisation/team access and user requirements. Optional AI allowance or additional credits are defined in the selected package.

Example. A faculty licenses Wistudi for its teaching team to transform existing teaching materials into interactive courses, deliver live lessons, assign home learning and issue accompanying printable resources.

02 Managed Content Production & Licensing

Everything in Pathway 1 + Wistudi creates the commissioned content

For smaller schools and organisations without an academic content-development team, or without capacity to manage quality and production themselves.

What the customer provides. Curriculum or content specifications, learning objectives, source materials and required deliverables.

What Wistudi delivers. Our team develops and quality-checks the agreed interactive curricula, courses, Flows, XP Videos, activities and printable resources. Appropriate specialist partner technology may be incorporated where agreed.

How it is handed over. Completed content is delivered directly into the customer's own Wistudi organisation account, ready for faculty to teach, present and assign. They still retain the licensed tools to create more content themselves.

How it is charged. Two distinct commercial components: (1) Wistudi licences to operate the platform and (2) a separate, agreed lump-sum project fee for managed content production.

Example. A small school supplies its science curriculum brief. Wistudi develops and delivers complete interactive lessons, assessments and worksheets into the school's licensed account.

03 + 04 PARTNERS & LOCAL COMMERCE

03 EdTech Partner Bundling & Resale

Partner-owned customer relationship • Distributor supplies the Wistudi licences

An existing EdTech company or education publisher integrates its specialist technology with Wistudi and bundles it with co-created content for sale to its existing schools and customers.

How it works. The partner and Wistudi evaluate integration feasibility, then collaborate on publishable curricula, interactive courses, Flows, XP Videos, activities and supporting worksheets.

Who sells to whom. The EdTech partner markets the agreed combined offering, bills its own end customers and receives their payments. The Wistudi distributor facilitates the relationship and sells Wistudi licences to that EdTech partner.

Commercial structure. Licence purchases may use an agreed bulk allocation or other negotiated model. Integration and content-production fees are scoped separately. Rights to distribute co-created content across customer accounts must be expressly agreed.

Example. A STEM provider integrates its simulations into Wistudi Flows. Together the companies produce interactive science courses. The STEM provider bundles and resells the solution to schools, purchasing the necessary Wistudi licences through the distributor.

04 Local Merchant of Record

LIMITED AVAILABILITY • Selective appointment by territory

An appointed distributor operates Wistudi's local merchant/payment arrangement in an agreed market, allowing domestic customers to pay through supported local methods while the global platform remains separate.

Local setup. The distributor manages the local merchant account and may operate a dedicated country storefront (for example, wistudi.vn, subject to agreement).

Platform connection. An agreed API/payment integration connects local transactions with Wistudi account creation, licence activation, subscription status and transaction records on the global platform.

Revenue arrangement. The distributor receives an agreed share of eligible local transactions through the agreed allocation/settlement mechanism, where supported by the payment provider. Merchant, tax, refund and compliance responsibilities are defined by contract.

Example. A Vietnamese customer purchases Wistudi in VND through the local storefront; payment confirmation activates their global-platform access and the transaction is allocated according to the local agreement.

OPTIONAL CAPABILITIES

Add-ons & special feature rollouts

Available across the pathways according to customer requirements, upcoming releases and confirmed contracts. The standard organisational LMS and creation tools are not extra add-ons.

OPTION	WHAT IT ADDS / WHEN IT IS RELEVANT
Advanced organisation management & LMS	Expanded administration for institutions without another LMS, or requiring more sophisticated faculty, department, multi-site, reporting or access management. Separately scoped.
Integrated video conferencing	Proposed customised teaching rooms directly inside Flows and XP Videos using Zoom SDK - not conventional screen sharing. Intended features include learner interaction with the material, teacher-to-learner control handover and integrated chat. Subject to rollout, technical feasibility and connected Zoom account entitlements.
Specialised learning blocks	Commission custom activity or assessment blocks based on the institution's specifications, educational objectives and agreed delivery scope.
External LMS / EdTech integrations	Evaluate supported LTI 1.3, API, SDK or embedding options to connect existing LMS, teaching applications or specialist EdTech directly with Wistudi where feasible.

How a distributor can progress an opportunity

1 QUALIFY	2 SCOPE	3 AGREE	4 DELIVER
Identify the customer type and the right pathway(s).	Confirm user access, AI needs, deliverables and any integration requests.	Wistudi/distributor confirm fees, licences, roles, rights and terms.	Activate licences; complete any agreed production, integration or local setup.

Important commercial notes

- AI assistance can accelerate publishing but does not replace human academic oversight or quality assurance.
- Content-production fees are separate from the licences needed to access, teach, present and distribute the delivered materials.
- Integrations and unreleased features require feasibility review, mutually agreed scope and a confirmed commercial arrangement.
- Any exclusivity, local merchant appointment, bundled-content distribution rights or custom-development ownership must be set out in a separate agreement.
